

PRAVEER NAGARAJA BYNDOOR

(315) 395-5316 | pbyndoor@svr.edu | [LinkedIn](#) | [GitHub](#)

EDUCATION

Syracuse University | School of Information Studies

Master of Science, Information Systems

- Coursework:** Applied Machine Learning, Database Management, Information Systems Analysis, Information Management and Technology

Dec 2026

Syracuse, NY

Visvesvaraya Technological University | M V J College of Engineering

Bachelor of Engineering, Chemical Engineering

Jul 2022

Bengaluru, India

PROFESSIONAL EXPERIENCE

Coditas Solutions LLP

Software Engineer

Pune, India · Aug 2022 - Dec 2024

EshopBox (E-commerce Platform) | Payment, App & Integration Team

Pune, India · Jan 2024 - Dec 2024

- Designed and scaled backend systems handling 10k+ products and 5k-10k orders/day across 11+ sales channels on GCP App Engine using Spring Boot and PostgreSQL with HikariCP
- Automated event-driven async workflows using GCP Pub/Sub and Cloud Scheduler, reducing manual intervention by 60% and enabling high-availability reconciliation at scale
- Architected resilient payment integration with idempotent transaction handling, exponential backoff retry via Spring Retry, and distributed audit logging across microservices
- Integrated 11+ external APIs with Resilience4j circuit breaker patterns ensuring fault tolerance and low-latency response across distributed payment services
- Participated in 24/7 on-call rotations monitoring GCP production environments, maintaining mean time to resolution under 30 minutes

Ambry (Healthcare Reporting Platform)

Pune, India · Jun 2022 - Jun 2023

- Deployed and maintained 15+ REST APIs for patient report generation serving 1k+ users, reducing response times by ~20% through JPA query optimization and Redis caching
- Developed comprehensive test suite using JUnit 5 and Mockito with automated Postman scripts, achieving high reliability and catching regressions across release cycles
- Optimized PostgreSQL schema reducing report generation time by 35% through strategic indexing, batch fetching, and query execution analysis
- Resolved 60+ code quality issues and secured patient data with Spring Security JWT authentication, role-based access control, and full audit logging

OneView (Internal L&D Platform)

Pune, India · Jun 2023 - Dec 2023

- Launched a scalable interview scheduling system integrating Spring Boot with Google Calendar API via OAuth 2.0 and webhooks, serving the entire organization's hiring workflow
- Implemented JWT-based authentication with 24-hour access and 7-day refresh tokens ensuring secure, stateless request validation at scale via Spring Security filter chain
- Reduced developer onboarding and integration time by 50% through clear API documentation and technical specs covering architecture decisions and integration tradeoffs
- Engineered fault-tolerant API integration with exponential backoff retry via Spring Retry and Resilience4j circuit breaker ensuring high availability under rate limits

PROJECTS

EverWear | <https://everywear-psi.vercel.app/>

- Delivered a full-stack peer-to-peer clothing rental marketplace with role-based dashboards for Buyers, Sellers, and Admins - live at everywear-psi.vercel.app
- Designed scalable marketplace logic including Admin approval workflows, double-booking prevention, and an escrow-style credit system protecting transactions end-to-end
- Shipped a production-deployed MVP from concept through deployment as part of a university sustainability competition targeting textile waste reduction

Hotel Review System

- Architected distributed microservices platform with 3 independent services communicating via Feign Client, routed through Spring Cloud Gateway with centralized auth and load balancing
- Implemented Netflix Eureka service discovery and Hystrix circuit breaker ensuring high availability through configurable timeouts, fallback responses, and resilience patterns
- Developed 25+ REST APIs following database-per-service pattern with transactional boundaries ensuring data consistency across distributed services

Employment Management System

- Built scalable 12+ endpoint REST API with JWT authentication, custom permission classes, and role-based access control using Python and Django REST Framework
- Achieved 80%+ code coverage with pytest-django covering unit, integration, and API endpoint tests using APIClient and factory_boy fixtures
- Optimized MySQL schema with Django ORM eliminating N+1 queries and adding indexes on high-frequency lookup fields improving query throughput

TECHNICAL SKILLS

- Languages:** Java, Python, SQL, JavaScript/TypeScript
- Backend Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, Django REST Framework
- Frontend & Full-Stack:** Next.js, React, Supabase, Vercel, production deployment
- Distributed Systems:** Spring Cloud (Eureka, Feign Client, Hystrix, Gateway), circuit breaker, service discovery, event-driven architecture, fault tolerance, high availability
- API Development:** REST APIs, OAuth 2.0, JWT, webhook processing, Postman
- Databases:** PostgreSQL, MySQL, Redis, HikariCP, query optimization, schema design
- Cloud & CI/CD:** GCP (App Engine, Pub/Sub, Cloud Scheduler, Cloud Build, Cloud Monitoring)
- Testing & Quality:** JUnit 5, Mockito, pytest, Postman scripting, SonarLint, code reviews
- Tools:** Git, GitHub, Docker, IntelliJ IDEA, VS Code, Jira, Maven

CERTIFICATIONS

- Certified in Java Backend Development & Clean Coding: Coditas Technologies | Dec 2022
- Clean Code Championship (CCC): Coditas Technologies | Aug 2023
- Certificate of Advanced Study: Applied Data Science, Syracuse University | Dec 2025
